

GROWING FOOD FOR WILDLIFE

WORKING BEES August to November 2024

Community Environment Centre, Currie Avenue Annangrove.

Join us at our working bees as we help grow food for sick, injured, and orphaned native wildlife in the care of local wildlife rescue groups!

This project aims to help wildlife and wildlife carers in the community by caring for native planting plots that grow food for rescued wildlife in care. You can help by joining a working bee caring for the planting plots, help collect foliage for wildlife carers in need or become a wildlife grower donating native foliage from your own backyard!

A typical working bee may involve caring for the native planting plots, harvesting native foliage for wildlife in care, walks and talks on wildlife and conservation and a social BBQ at the end of the event (BYO food) to connect, socialise and share a meal together with fellow volunteers in your community!

JOIN US!
at our next working bee! Enjoy an activity and help wildlife carers in your community!
